

Petroleum Tapes

- A cold-applied PVC pipe wrap for use on small diameter buried pipe with a graded backfill
- For field welds, fabrications bends, and fittings
- Available in Tropical and Temperate grade

Pipeline tapes-PCV bitumen

- Broad range of widths, lengths, and thicknesses to match all pipeline requirements
- Long-term corrosion protection for buried pipelines
- Easy to apply and repair
- Used on a wide range of pipelines, joints, and fittings
- Works in the most challenging natural environments
- A complete system including tapes, primer, and moulding compound.
- Over 30 years of field-proven performance
- Globally recognized as a key corrosion protection solution by major pipeline owners Bitumen pipeline protection tapes.

Longwrap Petrolatum Tape is a 1.15 mm VOC Free, cold applied, wax based tape designed to protect piping and metal structures from damage and deterioration caused by corrosion at temperatures up to 70°C (158°F). This multi-environment coating is appropriate for use below grade in dry, damp or wet operating conditions. The Longwrap Petrolatum Tape encapsulates the surface in order to protect it, this allows for easy inspection of the substrate and repair of the coating. The tape is used with the Longwrap Paste which completely wets out the substrate surface and displaces any moisture.

Longwrap Petrolatum Tape is a highly moldable protective coating that will easily conform to irregular contours and difficult to coat structures. It is available in both a Temperate and Tropical grade.

SUBSTRATE COMPATIBILITY Steel, Stainless Steel, Ductile Iron, Other Metals,

Primer Features

- Shake primer containers well and stir contents thoroughly
- Primer can be easily and evenly applied by brush or roller
- A careful caution must be paid not to create air bubbling
